Table System 900

# The flexibly applicable multifunctional table offers a variety of possibilities

The Table System M900 is more than just a lectern worktop. Thanks to its pneumatic spring mechanism the table top glides gently to whatever height the user requires. This is how the “elevator table” can be adapted to any situation extremely easily as a table for quick meetings or for storing and filing next to the workplace. The table can be easily relocated on the optional casters; it can be equipped with a varying base plate for a stable and elegant impression. The multifunctional Table System M900 by Merkt stands out due to flexibility, variability and its high-value appearance. It is an essential feature in any office or reception environment.

All variants can be combined with floor plates. The tables equipped with pneumatic springs can also be combined with casters or glides.

① **Height adjustment.** Pneumatic spring height adjustment by hand release. Height adjustment range: 28,35” to 45,67” table height. Fixed height and adjustable versions using regular perforations in the frame are also available.

② **Guiding mechanisms.** High-grade roller guiding mechanisms ensure maximum stability and optimum gliding qualities.

③ **Base.** Interchangeable plates plates and mobile base elements make it easier to suit individual customer requirements.

④ **Finish.** Frames are supplied with a high-grade powder coating. Various frame parts are also available in stainless steel or chromed versions.

**A flexible solution for “tiny spaces”.**  
The new, mobile lectern table by Merkt offers two options for height adjustment. On the one hand, Merkt offers the pneumatic spring height adjustment with hand release and an adjustment range from 28,35” to 45,67”, on the other hand with pin adjustment also in the range from 28,35” to 45,67”.

The side table offers a convenient, free standing position and is suitable as a speaker’s lectern and as a small mobile side table which can easily assume many further tasks. The table can be easily relocated on the optional casters by just slightly tilting the desk.

The mobile side table can be stacked in a small place and stored safely thanks to its space-saving design.
